

Linsae multi-feature PDF fixture

Page one uses an embedded DejaVu Serif glyph set so pdf.js emits the font as a `data:font/woff2` URI, exercising the `font-src` data: CSP path that tiny.pdf misses. Ligatures: `fi fl ff` — accents: `é ü ñ ç ø`.

Greek + symbols to widen the glyph table: `αβγδ Σ ∫ √ ≈ ≤ ≥ → ←`.

Second page

This page forces a multi-page document so the worker decodes more than one page. Embedded raster image follows (a real JPEG/PNG XObject):

More serif body text in the embedded face to keep the font subset on this page too: the quick brown fox jumps over the lazy dog
0123456789.

Third page

A third page with an inline SVG vector graphic and additional embedded text, ensuring multipage + embedded-font + image coverage in one fixture.

vector

End of fixture. Glyphs again: é ü ñ ç ø fi fl — closes #153 coverage.
